

Trafalgar Dock Celebrating the historic dock

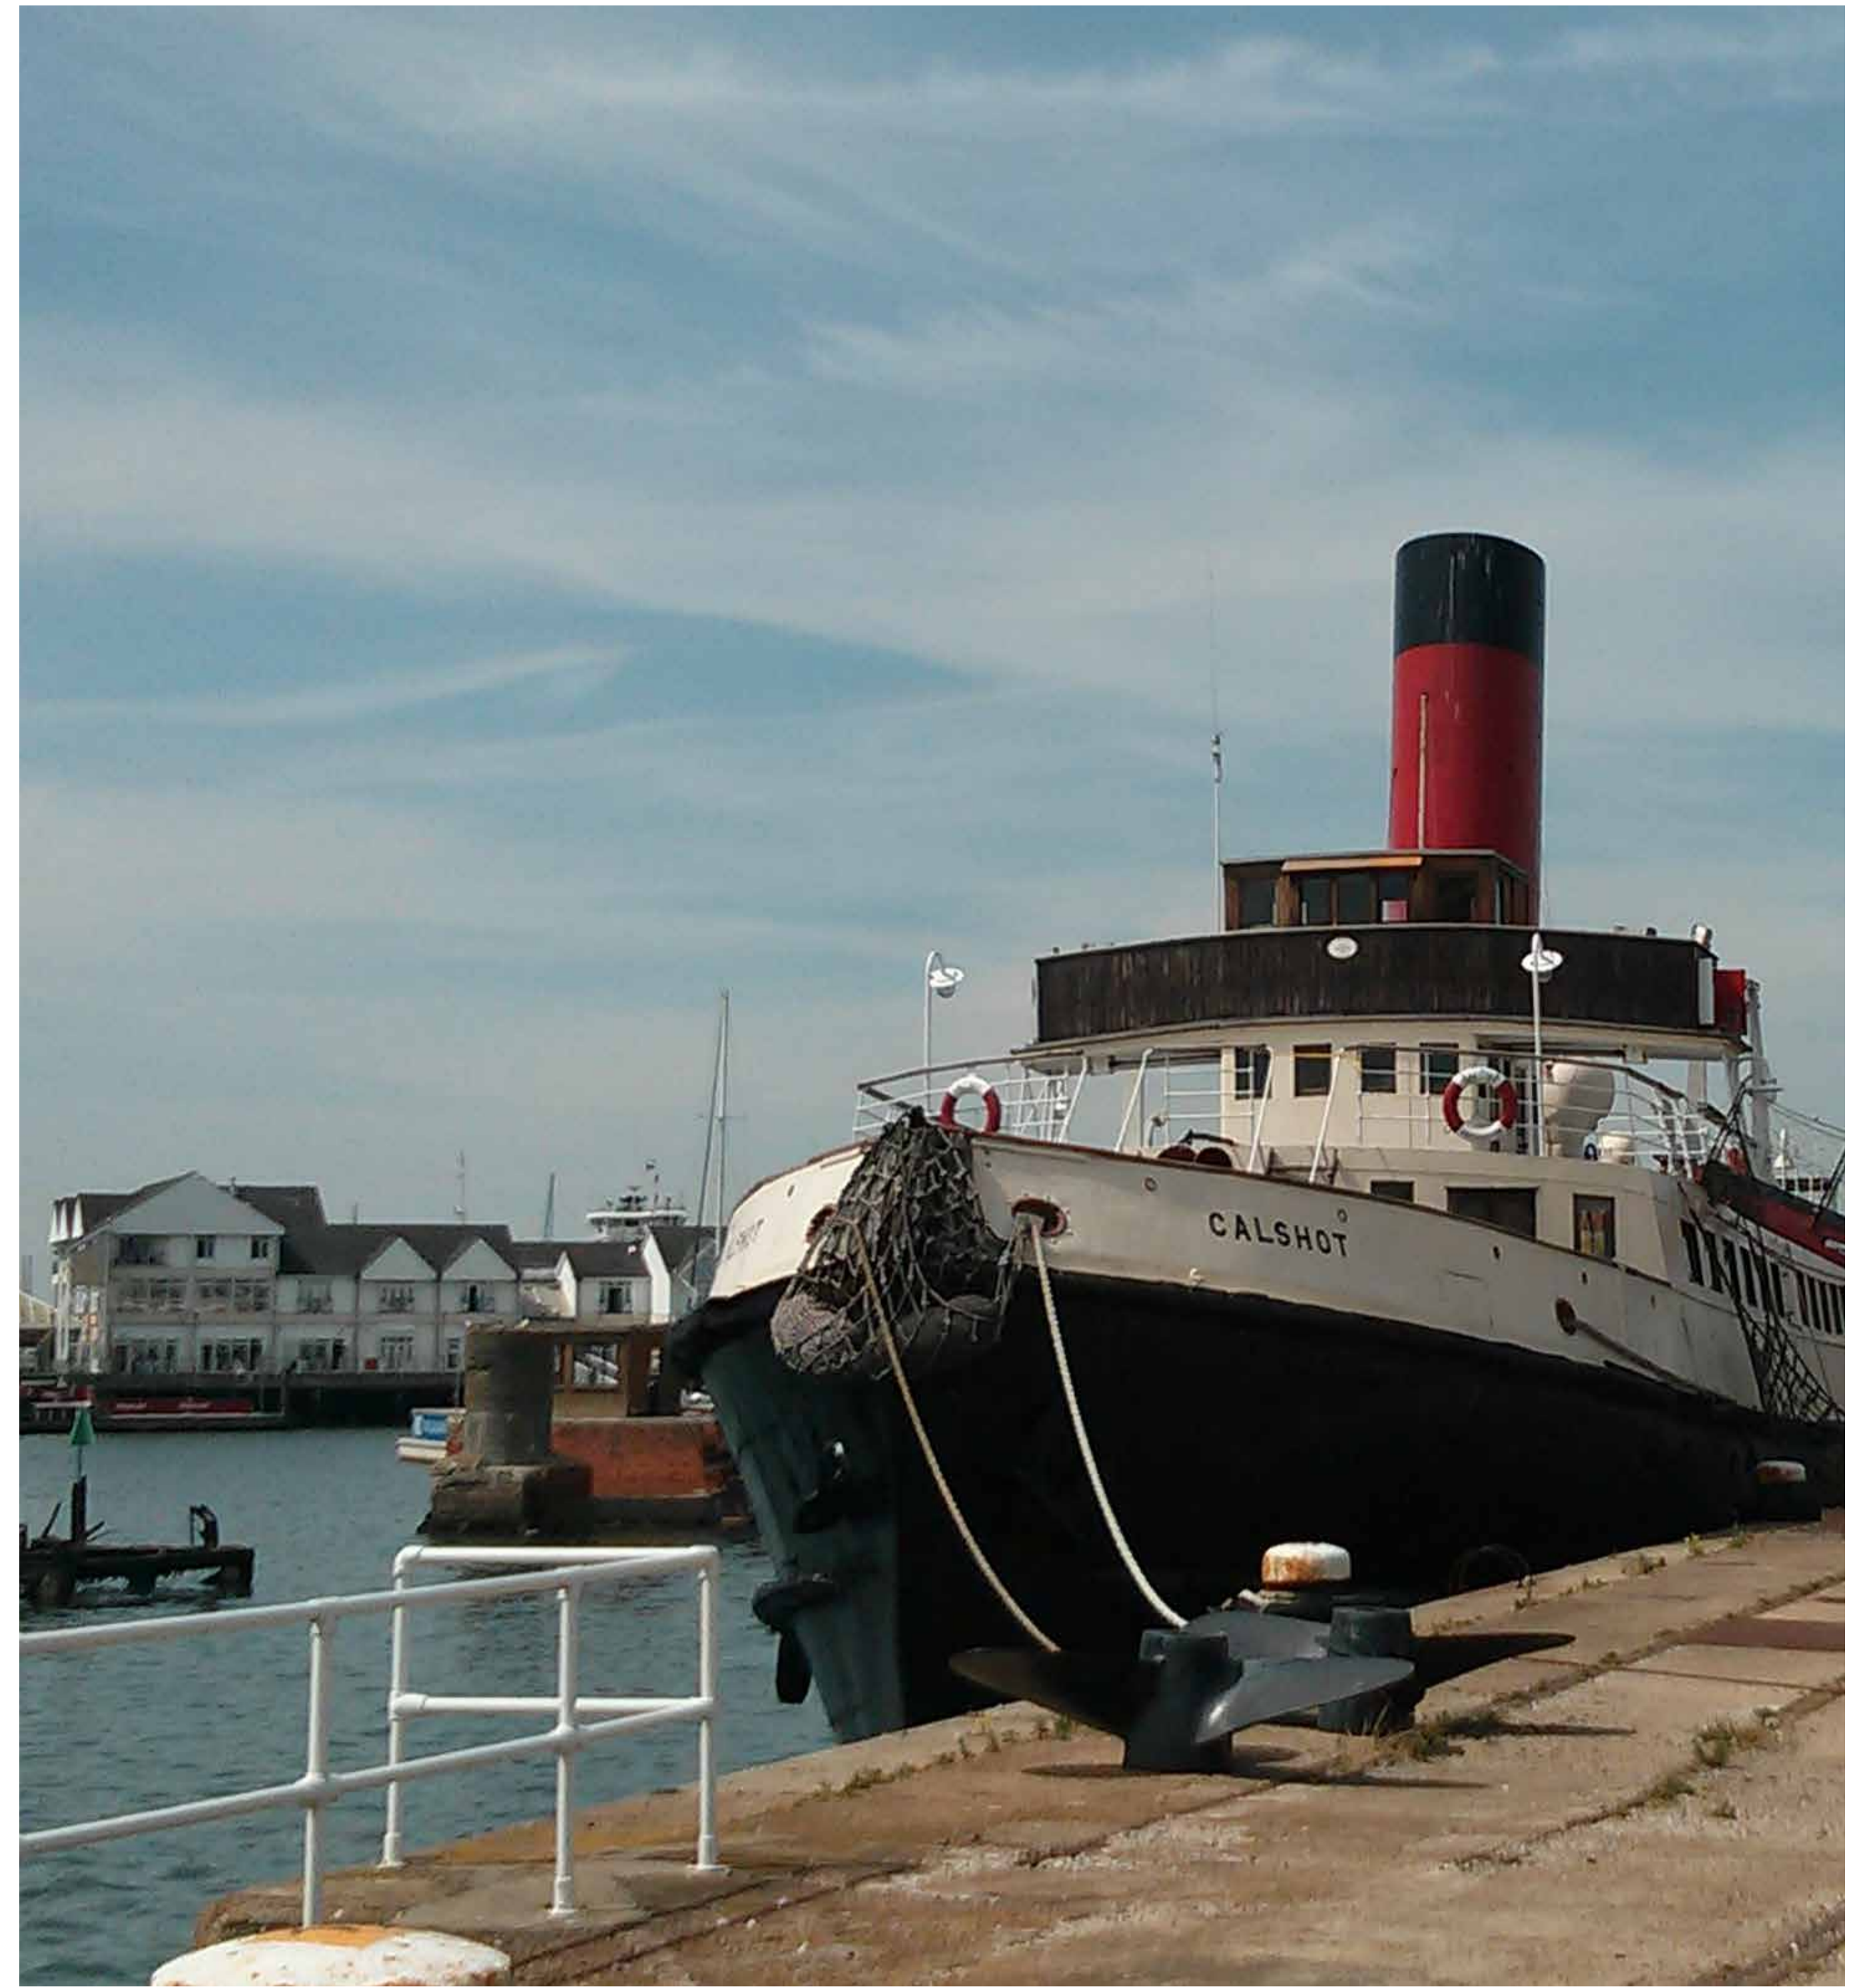

The development provides the opportunity for the heritage of the docks to be celebrated and exhibited.

An exciting
new waterfront
for Southampton

Pump well at Trafalgar Dock

MV Calshot passenger tender and tug

The following initiatives are being explored with Southampton City Council:

- The pump well being made watertight, general debris removed, and the remnant equipment on the pump pit floor (motors, pumps and valves) cleaned and lit appropriately and sympathetically so they can be viewed by visitors through glass lenses/panels placed above the existing central void area
- Public realm proposals to the south, west and east of the new terminal building incorporating remnant sections of the crane rail and bollards
- Repositioning the information panels currently located at the head of the dry dock to an area south of the new Red Funnel terminal building to allow greater appreciation of the former function and history of the site. Consider adding to these panels to illustrate growth of the docks and present/historic importance of cruise liners (with assistance from Carnival)
- Red Funnel passengers departing from Trafalgar Dock could be given the opportunity to download an app to their smartphones/tablets that would recreate a historic maritime seascape, based on an interactive timeline to track the development of the docks and Port of Southampton. As a minimum, visitor information will be available for arriving passengers
- MV Calshot Tug retained at the site allowing greater public appreciation of the site's maritime heritage.
